

Laboratory Rotary Dividers

Models 4203 & 4204

- More quiet than gravity style dividers.
- Completely enclosed dividing mechanism provides a clean environment.
- Rugged and durable for many years of cost savings and effective use.
- Available in 110 and 220 volt models.
- Each unit built to order for your specific needs.

Model 4204

The only GIPSA approved device of its kind, Gamet Rotary Dividers are fast and accurate to within 1/10th of 1% of the total sample by weight. Because you can reduce a sample by 90% in a single pass, this divider can significantly reduce the length of time it takes one employee to handle and divide larger samples. The Laboratory Rotary Divider series eliminates the need to divide samples many times as with traditional gravity type dividers.
